Summary

Backend engineer with **7+ years** building cloud-native financial and data systems, specialised in **modernising legacy platforms onto AWS**. Currently at **Itaú** (via BRQ), where I build the serverless and ETL pipelines behind regulatory reporting to **Receita Federal** and to more than **1,000 Brazilian municipalities**. Previously scaled onboarding, benefits and insurance services at **Betterfly**, an InsurTech unicorn with **1M+ active users**. Creator of **pixbitcoin.org**, a self-serve Bitcoin on-ramp that has processed over **R$700k** for **1,000+ users**. Deep expertise in Python (Django, FastAPI, Flask), serverless architectures (Lambda, Glue, Step Functions, S3), micro-services and high-throughput REST APIs. Native Portuguese, fluent English and Spanish.

Experience

September 2024 - PRESENT
Itaú Bank via BRQ Digital Solutions, São Paulo, Remote - Senior Software Developer

- Built the **AWS Step Functions + Glue** pipeline that generates the **crypto transaction reports filed with Receita Federal**, replacing a manual process that consumed **weeks of an analyst's work every month**
- Helped design and build the **AWS-native investment statement product**, replacing a hybrid **AWS/mainframe** pipeline whose split ownership caused constant rework and recurring customer-record inconsistencies
- Developed a **Python/AWS Lambda + S3 microservice** that transmits monthly **XML tax filings to 1,000+ Brazilian municipalities**, reconciling multiple registration databases; the largest municipality alone reaches **files of millions of lines**
- Migrated a critical **Angular** screen out of the monolith into a **micro-frontend**, taking the team from the monolith release train to **independent daily deploys**

January 2025 - PRESENT
PixBitcoin - Founder & Developer (Side Project)

- Conceived, coded and launched a **one-click Bitcoin & stable-coin purchase portal** on Pix and the Liquid Blockchain; **R$700k+ transacted** across **1,000+ users** in its first year
- Built **Magic-Link auth**, on-chain wallet management and the spread/fee engine end to end; stack: FastAPI, Django, Tailwind, Sideswap Manager, Docker and Rust

August 2021 - September 2024
Betterfly (InsurTech Unicorn, Chile), Santiago, Remote - Backend Developer

- Built asynchronous onboarding services for a platform with **1M+ active users**, absorbing enterprise B2B launches that provision **thousands of employees at once** through email, signup and partner enrolment
- Cut partner and insurer provisioning from a **48-hour SLA down to a few hours — minutes on some integrations** — by modernising the add-on pipeline, owning several partner integrations end to end
- Contributed to the migration of the **Django monolith to AWS microservices**, cutting release lead time from **weeks to days**, and to **minutes for hotfixes**
- Delivered insurance quote, policy and insurer-integration web services across four teams: **Onboarding, Benefits, Insurance and Insurance Integration**

December 2020 - August 2021
Tradex Solutions, São Paulo, Remote - Backend Developer

- **Owned the backend end to end** for a trade-marketing platform, building every REST API behind a **ReactJS** decision-support dashboard and a **React Native** field app used by in-store reps
- Served **near real-time analytics over hundreds of thousands of pharmacies**, letting consumer-goods brands drill from national metrics down to **individual point-of-sale**
- Cut average API latency by **~40%** by refactoring SQL queries, adding caching layers and instrumenting monitoring

March 2020 - November 2020
Skuad (Marketing & UX Startup), São Paulo, Remote - Python Developer

- Built web crawlers and integrations with the **Facebook Marketing API** and **Pipedrive**, replacing fully manual campaign reporting for **dozens of B2B clients**, including major consumer brands
- Developed an automated report-generation system that put campaign data in clients' hands on demand and **cut client ad spend by 25%**

April 2019 - March 2020
Freelance - Python Developer

- Co-developed a property mapping system for **Bussola.farm** that lets fish farmers in the Amazon region visualise ponds and monitor production; stack: Flask, PostGIS, Leaflet, Docker
- Implemented menu-driven **WhatsApp chatbots** for local restaurants, cutting order response time **from minutes to seconds**
- Built high-converting landing pages for digital-product launches and scrapers using Requests, Selenium and BeautifulSoup

Education

2024 - 2026
B.Sc. Mathematics - Degree
Universidade Cruzeiro do Sul Virtual, Ariquemes-RO Brazil

2018 - 2020
Information Technology - Technical Diploma
IFRO (Federal Institute of Education, Science and Technology of Rondônia), Ariquemes-RO Brazil

2017
Game Development Course
FUTURA INFO, Ariquemes-RO Brazil (March 2017 - November 2017) Unity | C# | Javascript

2016 - 2017
Web Design Course
SINTERO Informática, Ariquemes-RO Brazil (November 2016 - March 2017) CorelDraw, Dreamweaver, Photoshop, etc

Technical Skills

Languages: Python, JavaScript, SQL, HTML, CSS

Backend & APIs: Django, Django REST Framework, FastAPI, Flask, REST APIs, API Development, Microservices, Asynchronous Processing, ETL, Data Pipelines

Data: PostgreSQL, DynamoDB, PostGIS, Pandas, NumPy, BeautifulSoup, Selenium, Requests

Cloud & DevOps: AWS, AWS Lambda, AWS Glue, AWS Step Functions, AWS S3, AWS EC2, Serverless Framework, Terraform, Docker, Jenkins, GitHub Actions, CI/CD, Nginx, Heroku, Railway, Git

Frontend: ReactJS, React Native, Angular, TailwindCSS, Bootstrap

Domain: Legacy System Modernization, Regulatory & Tax Reporting, Fintech, InsurTech

Testing: Pytest, unittest, Postman

AI & Blockchain: Large Language Models (LLM), LLM Integration, OpenAI API, MCP, Blockchain

Spoken languages: Portuguese (native), English (fluent), Spanish (fluent), French (learning)
